

# Approved Greywater Systems

Greywater is the wastewater from bathroom showers/baths and handbasins, laundries and kitchens. It does not include toilet waste. The Code of Practice for the Reuse of Greywater in Western Australia provides information on the requirements for the reuse of greywater in household gardens. It provides guidelines for householders and persons wishing to design and market systems.

The following list provides information on approved products. There are two types of Greywater Reuse Systems:

## 1. Greywater Diversion Device (GDD)

Diverts greywater without storage or treatment, it incorporates a hand activated switch or tap to divert the greywater to the garden or the sewer. Greywater from a GDD must only be reused in gardens via sub-surface irrigation only. Greywater Diversion Devices must have a WaterMark Licence, which demonstrates compliance with the Australian Technical Specification ATS5200.

There are two types of greywater diversion devices (GDD):

### Gravity GDD

A gravity diversion device incorporates a hand activated valve, switch or tap and is fitted to the outlet of the waste pipe of the plumbing fixture such as a laundry tub. GDD are not permitted to be fed with greywater from the kitchen. Greywater from GDD is diverted directly to a sub-surface irrigation system in the garden.

### Pump GDD

A pump diversion device incorporates a surge tank to cope with sudden influxes of greywater for distribution of the greywater directly to a sub-surface irrigation system in the garden. The surge tank does not operate as a storage tank.

## List of approved Greywater Diversion Devices

## 2. Greywater Treatment System (GTS)

Collects and treats greywater to a higher quality. Where the treated greywater is not disinfected, it may only be reused via subsurface irrigation. Where the treated greywater from a GTS is disinfected, and can achieve certain water quality targets, surface irrigation, toilet flushing, and cold-water laundry washing machine use may be possible.

It should be noted that conditions of approval may vary, depending on the design, with some systems not being permitted in unsewered areas, not accepting kitchen waste flows or being of a smaller scale.

Developers interested in large wastewater reuse schemes or 'in-house' reuse for commercial or subdivision developments should refer to the *Australian Guidelines for Water Recycling: Managing Health and Environmental Risks (Phase 1) 2006*.

### List of approved Greywater Treatment Systems

Manufacturer	Model	Date approved (WaterMark License Number)	Details
Nubian Water Systems Unit 3, Gateway Business Park 63-79 Parramatta Road, Silverwater NSW 2128 Ph: (02) 9647 2633 Fax: (02) 9647 2977 Email: enquiries@nubian.com.au <a href="http://www.nubian.com.au">www.nubian.com.au</a>	Nubian GT600	30/4/2015	Approved reuse methods: <ul style="list-style-type: none"> <li>■ Toilet flushing;</li> <li>■ Cold water supply to clothes washing machines;</li> <li>■ No kitchen greywater allowed</li> <li>■ Above ground spray irrigation;</li> <li>■ Surface drip irrigation covered by mulch;</li> <li>■ Sub-surface drip irrigation installed at around 100 mm depth.</li> </ul>
